the specification, and (2) comparing a similarity of the pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in a comparison tissue of a known BRCA-1-like or BRCA-2-like tumor. The method is useful for classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor. This sequence corresponds to an ovarian cancer -related gene having an altered pattern of expression in ovarian cancer. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                           Classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor by determining a pattern of expression in the ovarian tumor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          314

The invention relates to the isolation of novel genes (ACF3446-ACF34559)

C encoding proteins (ABR64180-ABR64281) involved in the process of
  encoding proteins (ABR64180-ABR64281) involved in the process of
  enaglogenesis. The nucleic acid molecules are useful in identifying and/or
  cobtaining full-length human genes involved in an angiogenic process. The
  containing full-length human animals derived from these are useful for
  containing of candidate pharmaceutical compounds used in treating
  considerably modified non-human animals derived from these are useful for
  containing of candidate pharmaceutical compounds used in treating
  conjogenesis-related disorders. They are also useful for diagnosing,
  prognosticating or treating an angiogenesis-related disorder, which
  controlled or enhanced angiogenesis or is a disorder in which
  containing a decreased vasculature is of benefit (e.g. cancer, rheumatoid arthritis,
  conjogenesis or is a disorder in which an expanding vasculature is of
  condulator of expression or activity of the polypeptide encoded by the
  conclusion or activity of the polypeptide encoded by the
  conclusion or activity of the polypeptide encoded by the
  conclusion or activity of the polypeptide encoded by the
  conclusion or activity of the polypeptide encoded by the
  conclusion or activity of the polypeptide encoded by the
  conclusion or activity of the polypeptide encoded by the
  concept the gene encoding one of the novel angiogenic protein
New angiogenic genes and polypeptides, useful for diagnosing, prognosticating or treating an angiogenesis-related disorder, cancer, rheumatoid arthritis, diabetic retinopathy, psoriasis cardiovascular diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1128 BP; 341 A; 290 C; 282 G; 215 T; 0 U; 0 Other;

This invention relates to novel human genes and gene product which are implicated in certain disease states. Compounds which modulate the proteins of the invention may have cytostatic, antinfinamatory, ophthalmological, antiatteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention and be useful for diagnosing or treating a hypoxia-regulated condition, erythropoiesis, or the biological response to hypoxia conditions including processes such as glycolysis, glucomeogenesis, glucose sincluding processes such as glycolysis, glucomeogenesis, glucose synthesis. The disease includes cancer, ischaemic conditions, reperfusion inflammatory conditions or wound healing. The present sequence is that of a disease related protein encoding DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      134

Ruben SM Barash SC, Rosen CA,

2001-465558/50 P-PSDB; AAU21678 polypeptides and polynucleotides useful as diagnostic reagents to ose diseases or disorders associated with aberrant expression or ity of polypeptides, and for treating cancers, rheumatoid arthritis. diagnose activity Novel

Claim 4; SEQ ID NO 121; 687pp; English

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides (AAU21568-AAU21851), and cDNA and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative disorders (e.g. leukaemia, bone cancer, bladder cancer, brain stem glioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal

disorders, pulmonary disorders, cardiovascular disorders and renal disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAS34767-AAS35050 represent cDNA sequences encoding for the novel human neoplastic disease associated polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                      202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            840
                                                                                                                                                                                                                                                                                 265

The invention relates to one of 238 disclosed human neoplastic disease-
associated polypeptides encoded by 171 disclosed cDNA sequences
(including their domains, epitopes, full-length proteins, allelic variants
or species homologues). Also included are there encoding nucleic acids, a
combinant vector comprising the nucleic acid, a recombinant host cell
comprising the nucleic acid (expressing the protein), an isolated
antibody that binds specifically to the isolated polypeptide, preventing,
treating or ameliorating a medical condition, diagnosing a pathological
condition or a susceptibility to a pathological condition in a subject,
in a biological assay, and the gene corresponding to the CDNA sequence.
The polypeptides, polynucleotides and antibodies are useful for
a biological assay, diagnosing, prognosticating, treating or
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
systemic lupus erythematosus, multiple sclerosis, autoimmune thyroiditis
or haemolytic anaemia), haematopoietic or haematologic disorders (e.g.
canaemia or thrombocytopaenia) e.g. ischaemia-reperfusion injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated human neoplastic disease-associated polypeptides and polynucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 2156;

                                                                                                                                                                                                                                                                                                                           The present sequence encodes a human apoptin-associating protein 1 (AAP). The protein is capable of providing apoptosis. APP polypeptides and polynucleotides are useful for inducing apoptosis, particularly when apoptosis is p53-independent. They may be used to produce pharmaceutical compositions which are used for treating a disease where enhanced cell proliferation or decreased cell death is observed, particularly in cancer or in autoimmune diseases, for diagnosing a disease related with aberrancies in the apoptotic process, and for detecting the presence of cancer cells or cells that are prone to cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides isolated or recombinant nucleic acid (I), its functional encoding an apoptin-associating proteinaceous (AAP) substance capable of apoptosis. (I), the vector comprising (I), the host cell comprising the vector and the proteinaceous substance encoded by (I) are useful for inducing apoptosis, particularly p33-independent apoptosis, and for treating a disease where enhanced cell proliferation or decreased cell death is observed, such as cancer or an autoimmune disease. A composition comprising the nucleic acid or the AAP may further be used for diagnosing a disease related with aberrancies in the apoptotic process, and for detecting the presence of cancer cells or cells that are

                                                                                                                                                                                                                                                                                           The present sequence encodes an apoptin-associating proteinaceous substance (apoptin-associating protein (AAP-1), which is capable of inducing apoptosis. AAP-1 polypeptides and polymucless are useful for inducing a p51-independent apoptosis. They are used for treating a figease where enhanced proliferation or decreased cell death is observed e.g. cancer or autoimmune disease. They are also used for diagnosis of diseases related with aberrations in the apoptotic process such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   268

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclootides are also used in diagnostics as expressed sequence tags for identifying expressed conditions as expressed sequence tags for identifying expressed conditions. (II) is useful in gene therapy techniques to restore normal consistent of genes. (I) is useful in gene therapy techniques to restore normal consistent of generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and (II) and (II) are useful for treating disorders of involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in a functions of mutations caid sequences. Assetly sor other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Assetly-Assays, a represent novel human disquestic coding sequences of the invention. Note: The sequence data for this content did not appear in the printed specification, but was obtained in the first of the content of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                134

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polymeptide comprising a sequence corresponding to included is a purified polymeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences in diagnostics as expressed sequence tags (EST) for in forensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations of the number of the sequence of the sequence is useful for generating antibodies specific for it. The present sequence is no of the 38043 isolated cDNA/EST sequences. Note: The sequence data of the third formular of the printed specification, but was not the present of the printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            641

Single pass sequencing. Bases called and trimmed with phred
VO.020425... Vector identified by cross_match with the -minscore 20
and -minmatch 12 options. Vector:pBluescriptII(5K+) R. Site
1:EcoRV(lost) R. Site 2:NotI Seq Primer: T7 Normalised library
constructed from pooled monocytes from Bos taurus (Holstein) and
Bos indicus (Sahiwals) cattle subjected to various stimuli,
including infection with the protozoan parasite Theileria annulata.

U.CF-ECI is a normalized_cDNA library containing the UI-CF-ECI is a normalized cDNA library containing the UI-CF-ECI is a normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I; and cloned directionally into pT7T3-Pac vector: The oligonucleotide used to prime the synthesis of first-terrand cDNA contains a library tag sequence that is located between the Not I site and the anaryments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TAG_TISSUE=Normal Lung Epithelial Cells Tissue nos 369-371

Site 2: Not I; The library was constructed according Bonaldo, Lemnon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarces gel. First strand cDNA synthesis was primed with oligo-dr primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is TGAGAGAGCC. This library was created for the University Iowa Brain Anatomy Project (BMAPP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

line CS5. The library was constructed according to
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
cDNA was ligated to an EcoR I adaptor; digested with Not
I, and cloned directionally into pT7T3-Pac vector. The
oligonucleotide used to prime the synthesis of
first strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is GCTCAAGGCT.

//cine=112-015-501
//cine=10rgan: eye, Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; UI-E-511 is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed stranded cDNA was ligated to an EcoR I adaptor, digested with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAAGA; lens, CGATTAGCGA; eye anterior segment,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   University of Iowa

modified polylinker; Site 1: EcoR 1; Site 2: Not 1;
UI-B-EJ1 is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand CDNA synthesis was primed
with an oligo-dT primer containing a Not 1 site. Double
stranded CDNA was ligated to an EcoR 1 adaptor, digested
with Not 1, and cloned directionally into pT7T3-Pac
vector. The oligonocleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not 1 site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes,
AGAATCAAGA; lens, CGATTAGCGA; eye anterior segment,
AAGCCART; optic nerve, CCATTAGAGG; Retina
Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This
library was created for the program, Gene Discovery in the
Visual System, supported by National Eye Institute (NEI).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1, Application US/08795303
; Patent No. 5948656
; GENERAL INPORMATION:
    APPLICANT: Anderson, Paul J.
    APPLICANT: Tian, Qingsheng
; TITLE OF INVENTION: COMPLEMENTARY DNA ENCODING THE SAME
INVENTION: COMPLEMENTARY DNA ENCODING THE SAME
INVENTION: COMPLEMENTARY DNA ENCODING THE SAME
CORRESPONDENCES: 21
; CORRESPONDENCE ADDRESS:
    ADDRESSEE: Sughrue, Mion, Zinn, Macpeak & Seas
    STREET: 2100 Pennsylvania Avenue, NW Suite 800
    CITY: Washington
GENERAL INFORMATION:
APPLICANT: Anderson, Paul J.
APPLICANT: Tian, Oingsheng
APPLICANT: Tian, Oingsheng
TITILE OF INVENTION: TIA-1 BINDING PROTEINS AND ISOLATED
TITILE OF INVENTION: COMPLEMENTARY DNA ENCODING THE SAME
NUMBER OF SEQUENCES: 2.1
CORRESPONDENCES ADDRESS:
ADDRESSEE: Sughrue, Mion, Zinn, Macpeak & Seas
STRET: 2100 Pennsylvania Avenue, NW Suite 800
CITY: Washington
STATE: DC
                                                                                                                                                                                                                                                                                                           COMPUTER READABLE FORM:
